

## Europe :: Denmark

### Introduction :: Denmark

#### Background:

Once the seat of Viking raiders and later a major north European power, Denmark has evolved into a modern, prosperous nation that is participating in the general political and economic integration of Europe. It joined NATO in 1949 and the EEC (now the EU) in 1973. However, the country has opted out of certain elements of the European Union's Maastricht Treaty, including the European Economic and Monetary Union (EMU), European defense cooperation, and issues concerning certain justice and home affairs.

**note:** the shifted design element was subsequently adopted by the other Nordic countries of Finland, Iceland, Norway, and Sweden

## Economy :: Denmark

### Economy - overview:

This thoroughly modern market economy features a high-tech agricultural sector, state-of-the-art industry with world-leading firms in pharmaceuticals, maritime shipping and renewable energy, and a high dependence on foreign trade. Denmark is a member of the European Union (EU); Danish legislation and regulations conform to EU standards on almost all issues. Danes enjoy a high standard of living and the Danish economy is characterized by extensive government welfare measures and an equitable distribution of income. Denmark is a net exporter of food and energy and enjoys a comfortable balance of payments surplus, but depends on imports of raw materials for the manufacturing sector. Within the EU, Denmark is among the strongest supporters of trade liberalization. After a long consumption-driven upswing, Denmark's economy began slowing in 2007 with the end of a housing boom. Housing prices dropped markedly in 2008-09 and, following a short respite in 2010, have since continued to decline. Household indebtedness is still relatively high at more than 275% of gross disposable income in the first half of 2013. The global financial crisis has exacerbated this cyclical slowdown through increased borrowing costs and lower export demand, consumer confidence, and investment. Denmark made a modest recovery in 2010, in part because of increased government spending; however, the country experienced a technical recession in late 2010-early 2011. Historically low levels of unemployment rose sharply with the recession and have remained at about 6% in 2010-13, based on the national measure, about two-thirds average EU unemployment. An impending decline in the ratio of workers to retirees will be a major long-term issue. Denmark maintained a healthy budget surplus for many years up to 2008, but the budget balance swung into deficit in 2009, where it remains. In spite of the deficits, the new coalition government delivered a modest stimulus to the economy in 2012. Nonetheless, Denmark's fiscal position remains among the strongest in the EU with public debt at about 46% of GDP in 2013. Despite previously meeting the criteria to join the European Economic and Monetary Union (EMU), so far Denmark has decided not to join, although the Danish krone remains pegged to the euro.
